

Wk 0.2 Bibliography

A page to keep track of which references are used. Note the table below aren't formatted citations, instead representing an easy way to keep track of references and the information needed to create formatted citations. Note that I intend to use a python script in my personal library to convert tabulated reference information to .bib files.

The tables generally have the following fields:

- CitationKey (internal reference name)
- Entry type (article, book, online, misc)
- Note (personal notes on the citation)
- URL (preferably direct link to where I got it from)
- ISBN (if relevant)
- DOI (if relevant)
- Author
- Title
- bookTitle
- Publisher
- Year
- Journal

ci- ta- tion- Key	en- try- Type	note	url	isbndoi	au- thor	title	pub- year	jour- nismal
lab- Hand- book	misc	The physics labs Y3 handbook we are provided with – includes experiment description, deadlines and marking criteria				Level 6 Msci laboratory handbook	2025	

ci- ta- en- tion- try- Key Type	note	url	isbndoi	au- thor	title	pub- jour- yearmonth	email
lab- mis- Ma- te- ri- als	The resources provided on blackboard for this experiment (this is a ~ placeholder citation; ideally would find proper citations for material later, but this should help keep track of quick notes)						
wild- mis- ingY2	Content derived from Y2 “from classical to modern physics” statistical mechanics sub-module - placeholder citation for stat mech knowledge pulled from my notes						
9thEdbook	A basic physics textbook, may be useful for physical constants or basic equations		9781337553278	Raymond A.	Physics for {Scientists} and {Engineers}	2018	Cengage Learning
Com-book plex- ityAnd- Crit- i- cal- ity	Recommended on bb on introductory page of lab materials		7309052021	K. Christensen, N R Moloney,	Complexity and Criticality	2005	Imperial College Press
